## 4. AT command complete set

A typical serial terminal emulator can also be used to control the EVK instead of the proposed test SW. In that case, the following parameters should be used:

- Default Baudrate : 9600 bauds
- Data bits: 8
- Stop bits: 1
- Parity: None
- Port: UART2 (EVK's micro 5pin connector is connected to UART2..)

The following table gather all AT command available:
